

EDUCATIONAL CABLE TELEVISION CHANNEL

The board recognizes the great potential value of an educational cable television channel. It also supports such a channel as a means of televising student accomplishments to the public, and as a way to broaden public understanding of district programs, activities and issues.

To provide students and staff with appropriate guidance in using this tool, and to protect individuals and the school district from potential harms associated with its use, the board directs the superintendent to develop procedures for the use of educational cable television as an educational access channel.

Operations shall be on the authorized cable provider system known as TV10.
